COURSE TOPICS

Prosthodontic Tips for Success: *This course will cover many of the current concepts, materials & techniques available in the restoration of implants, fixed crown and bridge, and removable prosthetic treatment plans. It will address clear & concise chair-side/benchtop protocols that will ensure the highest efficacy as well as quality final product at delivery. The presentation will also candidly address what laboratory techs would tell their dentists if they didn't face the repercussion of losing a client, including:* The most frequently cited roadblocks to communication between dental laboratory techs & the referring dentist. ♦ Comparing and analyzing the components of successful cases with those that have failed ♦ Applying concepts within the dental laboratory/office to achieve optimum patient care.

A Biomimetic Approach to Dentistry: *The intact natural tooth has the perfect combination of properties via dentin, enamel, and the DEJ. The properties of these individual layers combine to result in superior performance as a multi-laminar structure. An understanding of the structure, function, and resulting biomechanics of natural teeth allows for maximum success in restorative dentistry. This course will cover numerous biomimetic restorative techniques to improve your practice, including:* Dental Materials' properties suitable for enamel, dentin, and DEJ substitute ♦ The Adhesive Equation: Techniques to maximize bond strength and minimize polymerization stresses ♦ Tooth Biomechanics and the resulting prep guidelines ♦ Exciting possibilities of fiber reinforced composites for a variety of restorative techniques including direct, indirect, endodontically treated, and severely damaged and compromised teeth ♦ Preserving pulp-vitality with scientifically supported caries removal endpoints ♦ How to treat deep caries without endo treatment

Interpreting CBCT Scans & Incidental Findings: *This course will build your confidence for reviewing your Cone Beam data sets and give you guidance on how to proceed with incidental findings. Learning objectives include:* When to prescribe CBCT scans. ♦ Decipher 256 shades of gray by learning anatomy, anatomical variations, & pathology basics. ♦ Common incidental findings & when to refer ♦ Understand how to create a CBCT image report.
