Top 10 Benefits of the Pinhole procedure for patients:

1. Can correct gum recession in as little as 1 treatment session. Long term results are documented in the International Journal of Periodontology & Restorative Dentistry. (October 2012)
2. Minimal discomfort and swelling in most cases because the method is scalpel-free, suture free and graft free.
3. Typically, only 1-2 pinholes are made in the gums per quadrant of treatment.
4. The pinholes heal in 24 hours in most cases.
5. Only 2 over-the-counter pain pills required after treatment on average per the study in the International Journal of Periodontology & Restorative Dentistry. (October 2012)
6. Can prevent tooth loss and the need for other costly procedures such as implants or dentures.
7. Treatment sessions can be completed in as little as 1-2 hours in many cases.
8. Can enhance a more youthful and attractive appearance.
9. It is not unusual for patients to describe feeling happier due to being able to smile proudly without the shame or guilt associated with an ugly smile.
10. Most patients are back to work and normal light activities within 24-48 hours.
