Tony Daher DDS, MSED, FACP

Received a Master's degree in Medical Education from University of Southern California in 1984 and a postgraduate certificate in Prosthodontics in 1988 from the University of California at Los Angeles (UCLA). He is a Board Certified Prosthodontist and a fellow in the American College of Prosthodontists. Dr. Daher is currently an Associate Professor, past clinic director of the international student program at USC, and past director of Advanced Prosthodontics program at Loma Linda University. Presently he is the co-director of the Advanced Loma Linda Implant Study Club.

Bruce J. Crispin DDS, MS

Received a DDS in 1972 and an MS in 1975 (Fixed Prosthodontics) from the University of Michigan. He is a Diplomate of the American Board of Prosthodontics, professor emeritus from UCLA, accredited member of the AACD, and an alumni member of Omicron Kappa Upsilon. He founded the UCLA Center for Esthetic Dentistry as well as "Esthetic Professionals", an educational, patient care, and laboratory facility in Tarzana, CA.

Introduction

Treating partial or fully edentulous patients is one of the most demanding but also one of the most profitable components of private practice. Dental implants provide alternatives that both simplify treatment and improve outcomes. Over the last 15 years, Implants have become simpler to place and easier to restore allowing implant treatment to be easily incorporated into the daily life of any general practices.

This Prosthodontics Residency is designed for general dentists who want to learn how to diagnose and treat advanced prosthodontic cases and plunge into the wonderful world of implant dentistry. This residency is designed to be adaptable to any implant system and almost any clinical situation.

The components of this Residency will include lectures, case presentations, extensive hands-on exercises, individual case diagnosis and treatment planning and individual clinic experiences.

Topics

- Residency introduction and overview
- Treating the partial or fully edentulous patient: then and now
- Basic principles in implant dentistry: from fixture to final prosthesis
- Diagnosing simple to complex prosthodontic cases
- Gathering diagnostic data in implant dentistry
- Importance of cone beam scan & its uses
- Implant planning software
- Implant restoration sequences in fixed prosthodontics
- Optimizing esthetic results when using implants
- Selecting the best abutment
- Implant provisionals: short term and long term options
- Implant provisional options when no abutments exist
- Esthetic, economical and quality oriented complete dentures
- Implant removable overdenture sequences
- Esthetic and functional outcomes with removable partial dentures
- Combining fixed and removable prosthodontics
- Attachments in restorative dentistry
- Simplifying grafting extraction sites for the GP
- Mini-implants: indications and clinical techniques
- Implant surgical techniques: bone grafting, immediate vs delayed loading and placement
- Advanced implant surgical and prosthetic procedures
- Marketing implants in your practice

Tuition: \$4850 (Individual sessions available for \$595)
