Implementation of Simple Implant Dentistry Using Short, Narrow Platform and Mini Implants:

From Surgery to Rehabilitation...WORKSHOP

2 Day Lecture and Workshop: July 15-16, 2011 – 14 CE hours

\$1690 (\$1490 early registration
30 days prior to event)

Presented at the Holiday Inn Hotel Burbank-Media Center, 150 East Angeleno Avenue, Burbank, CA 91502

SYNOPSIS

Patients today are no longer willing to have their teeth sanded down for fix bridges; implant dentistry is here to stay. The demand for implants is growing exponentially... it is the fastest growing area in dentistry. It is clear that implant dentistry is not the domain of specialist, the demand is too great. Similar to extracting teeth, GPs and restorative dentist should perform the majority of implant procedures and refer the difficult cases to the specialist. In this practical workshop Dr. Ruiz will present the most logical system to select, place and restore simple implants in normal to narrow bone. Dr. Ruiz will also explain how to avoid unsatisfactory results. Placing and restoring implants in normal to narrow bone without bone grafting is an indispensable skill, which will increase your bottom line at least 20 to 30% each year.

IN THIS WORKSHOP YOU WILL LEARN:

- 2010 provisions of the Academy of Osseointegration.
- How to choose between regular, narrow and mini-implants.
- Perform 4 simulated, yet realistic implant placements, using a correct surgical protocol.
- Perform 4 simple and predictable restorative procedures!
- What x-rays and records are really necessary?
- When and how to use surgical templates.
- Simple surgical procedures to insure safe and predictable results.
- When it is better to refer...
- Detailed equipment and supplies list will be provided for immediate implementation.
- Assistants are encouraged to attend to help implement systems.

See the back of the flyer for registration details! ➔

JOIN RUIZ DENTAL SEMINARS IN THE FOLLOWING CITIES NEAR YOU:

July 8, 2011 Las Vegas, NV – 7 CE hours

**Implementing Occlusion into Everyday Dentistry:
Utilizing the Occlusal disease Management system**

In this very practical course you will learn how to apply a methodic and incremental approach to diagnosis that can be easily implemented in any practice, for every single patient. You will learn the seven signs and symptoms of Occlusal Disease, and how they impact the longevity of the dentition and restorative work. The Occlusal Disease Diagnosis System is a methodic and practical system to diagnose and treat Occlusal Disease, including occlusal equilibration and the "3 Golden Rules of Occlusion." This course also includes a system to educate and motivate patients about Occlusal Disease, leading to excellent treatment acceptance and added profits, while maintaining a highly ethical practice.

July 29, 2011 San Francisco, CA – 7 CE hours

Supra-gingival Dentistry: Easy, Predictable Porcelain

In this course Dr. Ruiz will demonstrate how non-metal restorations performed using supra-gingival techniques, make dentistry more predictable and trouble-free; as well as healthier for the patient, than any traditional restoration has ever been. Placing supra-gingival margins ultimately allows clinicians to make porcelain restorations healthier for the gingival tissue. In this course, Dr. Ruiz will demonstrate material selection and a new paradigm in preparation and cementation for porcelain veneers, onlays and full crowns. This course will touch on the importance and application of a simple and predictable system for performing comprehensive diagnosis, esthetic evaluation, and occlusal diagnosis. Dr. Ruiz will show the step-by-step procedure for tooth preparation, temporization, and sensitivity-free easily bonded cementation using "Supra-gingival Dentistry" techniques.

What Students Have to Say:

"Dr. Ruiz has the incredible ability to demystify Occlusion. I learned more in 1 day than I have learned at 3-day workshops elsewhere. Awesome analogies"

– Kristine Yoshida DDS

Call 818-729-9121 or 818-635-1240 to Get Your Copy of the 2011 Course Catalogue!

"WHAT EVERY DENTAL TEAM NEEDS TO KNOW ON PREVENTING AND TREATING PERI-IMPLANT DISEASE"

Chandur Wadhvani, DDS, MSD

Dr. Wadhvani received his specialty certificate in prosthodontics with a Master's Degree from the University Of Washington School Of Dentistry. He is currently in private practice in Bellevue and past president of the Washington State Society of Prosthodontics. He also teaches at the University of Washington in graduate prosthodontics.

Alfonso Piñeyro, DDS

Dr. Piñeyro completed his specialty training in Prosthodontics at the University of Rochester, Eastman Dental Center. He is currently in private practice in Bellevue and is president of the Washington State Society of Prosthodontics. He is an affiliate instructor at the University Of Washington Department of Restorative Dentistry.

COURSE OBJECTIVES - WHAT YOU WILL LEARN

- The prevalence and onset of cement induced peri-implant disease
- Which technique minimizes cement extrusion into the peri-implant mucosa
- How to modify stock abutments to reduce extrusion of cement
- What new hybrid abutment designs are available i.e. ICAP/ICAM
- What cements to avoid and which to choose for cemented implant crowns
- How to interpret radiographs which show excess cement around implants
- Which implant designs may be more susceptible to cement induced problems
- What are the advantages and disadvantages of platform switching
- Recommended supportive peri-implant maintenance protocols
- Simple procedures to avoid the risk of cement induced peri-implantitis

Morning presentation In contrast to classical implant studies which show that bone loss around dental implants occurs primarily during the first 18 months after implant placement, peri-implant disease takes an average of three years before it is apparent. Every implant system has design features that can contribute to peri-implant disease. This course will expose design weaknesses, particularly around cemented implant components, and how to avoid problems that can occur. Many types of cement have inherent problems; some corrode titanium and most are invisible on radiographs. Others are deliberately colored to blend with soft tissue which makes them difficult to detect and remove. Participants will have a better understanding of which cements to use, when and why. You will learn how to minimize the detrimental effect of excess cement and prevent implant failure. You will also be given up-to-date information about supportive peri-implant maintenance protocols.

Cement extrusion into the peri-implant sulcus may result in inflammation (peri-implant mucositis) which could compromise the soft tissue complex and lead to loss of integration (peri-implantitis) and implant failure. To date, no published protocol exists for cementing implant superstructures. The goal of this course is to critically examine these issues and give up-to-date and as of yet unpublished data that will be used to suggest a suitable protocol for clinical practice. Excess cement induced peri-implantitis must be considered iatrogenic dentistry and, if not addressed, a looming malpractice issue.

Afternoon presentation **MANAGEMENT OF PERI-IMPLANTITIS, OCCLUSION, AND IMPLANT ESTHETICS PROBLEMS: - A PERIODONTAL AND PROSTHETIC INTERDISCIPLINARY APPROACH**

The afternoon session will begin with discussion of an interdisciplinary approach to resolve cement induced failure in selected cases. High visibility anterior cases will be presented in which periodontal grafting procedures and prosthetic tissue manipulations can achieve an esthetic solution. The role of occlusion in implant failure will be discussed as well as occlusal management of tooth mobility in controlled periodontal patients.

An interdisciplinary approach to esthetic implant dentistry will be discussed in the final segment. Topics will include preferred bone grafting techniques to achieve an esthetic result, and the management of patients with a high smile line or with disproportional tooth size. How to place immediate implant restorations, and how to use platform switching to manipulate the soft tissue will be demonstrated in clinical case reports.

Att. Patrick J. Wood

Patrick J. Wood has been representing dentists for over twenty years in all of their business transactional needs. The law firm he founded, Wood & Delgado, handles dental practice sales, lease reviews, associate ships, partnerships, Dental Board defense and related legal needs of dentists in California. He has extensive lecturing experience at dental societies, CDA conventions, Practice Valuation Study Group (a national dental practice broker coalition) and at California dental schools. He has also written many articles on the business side of dentistry, which articles appeared in such dental industry magazines as Dental Economics, Journal of California Dental Association, Journal of Colorado Dental Association, and Strategies for Success. He is a continuing education provider with the California Dental Board.

California Dental Practice Act & Risk Management:

- Practical application of the Dental Practice Act
- Legal Agreements – Are you in violation?
- Common Dental Board litigation – A Case study
- Business issues related to the Dental Practice Act
- Drugs – Proper versus improper prescription protocol
- Dental Records – A dentist's ongoing liability
- Marketing your dental Practice
- Dental Procedures/Surgery – Duty to supervise licensed professionals
- Other practical topics relating to the practice of dentistry

Rodney M. Stine **Infection Control**

Mr. Stine has served as Director of Dental Affairs with California Dental Association. He was responsible for management of Regulatory Affairs and Membership Department. He also served as liaison between CDA and Board of Dental Examiners and other regulatory agencies. Mr. Stine reviewed and managed hazard communication requirements with Cal-OSHA, California Department of Health Services. He also served as Executive officer on Board of Dental Examiners.

Gail E. Harris **Sr. Clinical Risk Management Consultant**

At Medical Protective we bring a wealth of clinical risk management industry experience to the table including a team of seasoned professionals that average over 25 years in the industry. These professionals help our doctors proactively meet risk management challenges each day. Our long-term customers stay with us, because they recognize that we're committed, not just to defending them in court, but keeping them from ever seeing a courtroom. Gail E. Harris, RN, MS, CPHRM, Sr. Clinical Risk Management Consultant, combines a wealth of education and consulting experience with her strong clinical background--with special emphasis on the areas of corporate risk management, infection control, and adult education.

This seminar will update you and your staff on OSHA Regulations. You will receive the framework upon which to build your understanding of dental regulations. Mr. Stine is owner and operator of OSHA Review, Inc. a business specializing in regulatory compliance in California. He is a nationally known speaker.

Dr. D.P. Singh Nagra
 Chairman

Dr. Punjabi graduated from the Government Dental College at Bombay University, India, University of Southern California School of Dentistry, Los Angeles and Case Western Reserve University (CWRU) School of Medicine, Cleveland, Ohio. Dr. Punjabi has completed training in two specialties: oral and maxillofacial surgery at the MetroHealth Medical Center Campus of the CWRU and plastic and reconstructive surgery at the University of Miami/Jackson Memorial Hospital, Miami, Florida. He is board certified by the American Board of Plastic Surgery and the American Board of Oral & Maxillofacial Surgery.

Dr. Punjabi is in private practice in Redlands, CA. He is a Clinical Associate Professor of Plastic Surgery and Clinical Associate Professor of Oral & Maxillofacial Surgery at Loma Linda University and Chief of Plastic Surgery at Riverside County Regional Medical Center. His experience also includes private practice of dental/oral surgery in Jamaica, West Indies.

Dr. Punjabi's private practice encompasses the full spectrum of cosmetic and reconstructive plastic surgery including: eyelid, facelift, nose reshaping, chin, forehead lift, facial implants, breast augmentation/reduction/lift, liposuction, tummy tuck and cancer, trauma and birth defect reconstruction. Oral & maxillofacial procedures include wisdom teeth surgery, jaw surgery and dental implant reconstruction. Skin enhancement services include collagen injections, Botox, chemical peels and laser resurfacing.

This seminar will cover:

Surgical Management of Impacted Third Molars - A Step by Step Approach

- Patient Evaluation
- Risk Analysis
- Informed Consent
- Anesthetic Management
- Surgical Procedure
- Extract Any Tooth
- Management of Post Operative Complications
- Post Operative Care
